## SUMMARY

Final-year engineering student with strong foundations in Java, Python, Data Structures, and Machine Learning. Experienced in building AI projects. Actively seeking software or AI/ML roles to apply problem-solving and development skills.

## EDUCATION

**Bachelor of Engineering - Robotics and Artificial Intelligence** 2022 – 2026
Bangalore Institute of Technology Bengaluru, India
CGPA: 8.88

## SKILLS

**Programming Languages:** Java, Python
**Frontend:** HTML, CSS
**Databases:** MySQL
**Libraries:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn
**Tech Stack:** Git, GitHub, VS Code, Jupyter Notebook
**Core Skills:** Data Structures & Algorithms, Object-Oriented Programming, Problem Solving

## PROJECTS

**Heart Disease Prediction**
Tech Stack: Python, Scikit-learn, Pandas, Matplotlib, NumPy
- Developed supervised ML models (Logistic Regression, Random Forest) achieving ~58% accuracy in predicting heart disease risk.
- Created an end-to-end workflow including data cleaning, one-hot encoding, feature engineering, and metric-based evaluation.
- Assessed model quality using AUC-ROC, confusion matrix, precision, recall.

**Retail Sales Analysis**
Tech Stack: Python, Pandas, SQL, Matplotlib, Seaborn
- Analysed ~10,000 retail transactions from the Superstore dataset to identify sales trends and profitability patterns.
- Performed data cleaning, feature engineering, and exploratory data analysis using Pandas and built visualizations.
- Loaded data into SQLite and executed SQL queries to extract insights on category performance and loss-making products.

**Smart Parking Management System**
Tech Stack: Java, OOP, Java Collections (ArrayList)
- Developed a console-based parking management system using Core Java and Object-Oriented Programming principles.
- Built features for vehicle parking, removal, search, and parking fee calculation based on duration.
- Designed a menu-driven interactive console interface for user operations.

**E-Commerce Website UI Clone**
Tech Stack: HTML5, CSS3
- Designed and developed a responsive e-commerce homepage UI using HTML5 and CSS3.
- Utilized Flexbox and CSS layout techniques to create structured and visually consistent page design.
- Applied hover effects, background images, and UI styling to enhance user interaction.

## CERTIFICATES

- Python for Machine Learning, Data Science, AI and Development
- Python for Data Analysis: Pandas and NumPy
